

15' Dual Coiled Air/Oxygen Hoses

The 15' dual coiled air/oxygen hoses are ideal for connecting any equipment that must be connected to both an air and oxygen gas source (ventilators, air/oxygen blenders, CPAP devices, and high flow cannula devices).

- The coiled nature of the hoses makes them easy to stow during storage or transport (hoses stay up off the floor).
- The coiled nature of the hoses also stay up off the floor during use no matter how close you get to the wall outlet. This does not create a tripping hazard as traditional hoses can.
- Since the hoses are fused together except for the ends, they don't get tangled with one another.

Ordering information - Part # 1013

Also available: 15' coiled green oxygen hose (Part #1014)

- Provides the same convenient features of the dual coiled hose for items that only need an oxygen connection (such as the new TV-100 transport vent or the Crossvent models with Air Entrainment.)

Note: If you are ordering this hose for a blender application, make sure you order the PFIT150 (male-to-male DISS fitting) so the oxygen hose will connect to the oxygen input on the blender.
